Cementitious Waterproofing

Ecoproof CWP

SKU: WP-CWP-001

> *One-component cementitious crystallization waterproofing system for concrete structures.*

DESCRIPTION

ECOPROOF CWP is a one-component cementitious slurry waterproofing system by crystallization. The system gives a permanent solution to any seepage or water ingress in concrete structures.

The crystals formed block the capillaries and minor shrinkage cracks in the concrete to prevent any ingress of water, giving permanent water tightness to the structure.

Recommended for sealing and waterproofing applications in water-retaining concrete structures like water tanks, reservoirs, swimming pools, water treatment works, and canals. Also provides an excellent barrier against seepage in tunnels, basements, foundations, retaining walls, lift pits, decks, and bridges.

TECHNICAL SPECIFICATIONS

Type	One-component cementitious slurry
Coats	2 coats recommended
Action	Crystallization
Coverage	1.5–2 kg/m² per coat
Application	Brush or spray

waterproofing crystallization concrete water tank basement
