Cementitious Waterproofing

Ultraflex-2K

SKU: WP-2K-002

> *Two-component flexible cementitious waterproofing slurry for wet areas, pools and facades.*

DESCRIPTION

ULTRAFLEX-2K is a two-component flexible cementitious waterproofing slurry. On curing, it produces a strong, highly flexible and impervious film which bonds strongly to concrete, masonry and other substrates including aerated lightweight concrete blocks.

Used for waterproofing of wet areas, water tanks, swimming pools and building facades. Provides a fully bonded and monolithic surface without joints. Chemically resistant against Chloride and Sulphate ions.

Highly recommended for foundations, basements, wet areas (kitchens, bathrooms and balconies), roofs, and water-retaining structures like swimming pools and water tanks.

TECHNICAL SPECIFICATIONS

Type	Two-component flexible cementitious slurry
Coats	2 coats
Coverage	1.8–2.2 kg/m² per coat
Resistance	Chloride & Sulphate resistant
Flexibility	High

waterproofing · flexible · swimming pool · wet areas · basement
